08 · EVIDENCE AND SOURCES

Evidence and sources

The facts behind the pack: published market data, engineering validation, platform measurements and every outside source cited, with links.

Investor pack	Date	Status
Document 08	October 2026	Confidential · for discussion

Prepared by the founder of Tazdan for prospective investors. This document is not an offer to sell or a solicitation to buy securities. Forecasts are planning estimates, not promises. Licences, banking partners and live payment rails are not yet in place; status labels throughout show what is built, what awaits a partner, and what is switched off in production.

MARKET EVIDENCE

Central Bank of Libya foreign-exchange use, January–September 2026

The CBL publishes how banks use foreign exchange. Its latest report at the time of writing covers the first nine months of 2026. These are official actuals in US-dollar equivalent, taken from printed page 2 of the report.

CATEGORY	JANUARY–SEPTEMBER 2026	MONTHLY AVERAGE
Total bank foreign-exchange use	$19,341,501,336	$2.15bn
Documentary letters of credit	$10,113,469,233	$1.12bn
Personal purposes	$6,507,616,299	$0.72bn
Transfers	$2,681,416,804	$0.30bn

Transfers average about **$297,935,200** a month, an annual run-rate of roughly **$3.58bn** (simple arithmetic, not a CBL forecast). Categories do not sum to the total because merchant cards are reported separately.

> **How the pack uses this.** As context for the size of formal foreign-exchange flows only. "Transfers" covers far more than consumer remittances, and no customer counts, corridor splits or market share are inferred from it. The forecast is built bottom-up from customers and transfers, and the model reports base-case volume as a share of CBL monthly transfers as a sense check.

Engineering validation, 17 October 2026

CHECK	RESULT
Full server regression, database tests enabled	Passed 48 suites, 370 tests, none skipped
Clean database migration rehearsal	Passed all 58 migrations applied
Server production build and schema validation	Passed
Web and mobile type checks	Passed
Dependency vulnerability audit	Not completed advisory registry unreachable; no clean result is claimed
Production data, live providers, devices, load	Not tested outside the scope of local validation

Local results on an isolated test database; production was not accessed. New tests cover exact money conservation, concurrent limits, idempotent treasury references, session revocation and replay protection.

PLATFORM MEASUREMENTS

What has been built

MEASURE	VALUE
Database models	97
API endpoints	400+
Mobile screens	82
Control Cockpit pages	32
Source lines: server / mobile / web	39k / 58k / 23k
Risk rules / staff roles / permissions	17 / 12 / 49
Remittance corridors (sandbox)	12
Payout adapters (8 sandbox, 1 internal)	9

Replacement cost (estimate)

Rebuilding the platform is estimated at **72–122 engineer-months**, or about **$0.9–2.4 million** at $12,000–20,000 per fully loaded engineer-month. A team of six to eight would need 12 to 18 months.

A judgement-based effort estimate, not a valuation. It excludes licences, partner contracts, compliance staff, security assessments and the cost of time to market.

Status labels used in this pack

Built works end to end in the codebase and needs no outside activation.

Awaits partner complete, but needs a bank, licence or payout partner.

Off in production built, and refused in production until its conditions are met.

Measured from the repository on 7 October 2026, with migrations, tests and model counts updated on 17 October 2026.
