04 · FINANCIAL MODEL

Financial model summary

A five-year forecast in three cases, built up from customers, transfers, prices and costs. Shows what the $10 million of new capital does, where the cash goes, and what has to be true.

Investor pack	Date	Status
Document 04	October 2026	Confidential · for discussion

Prepared by the founder of Tazdan for prospective investors. This document is not an offer to sell or a solicitation to buy securities. Forecasts are planning estimates, not promises. Licences, banking partners and live payment rails are not yet in place; status labels throughout show what is built, what awaits a partner, and what is switched off in production.

OVERVIEW

Three cases, one set of formulas

The workbook drives a 60-month forecast from one case selector. Revenue is built from active customers, transfers per customer, average ticket and price, plus institutions subscribing to the software. Every cost is shown separately. Customer money is never counted as revenue or as company cash.

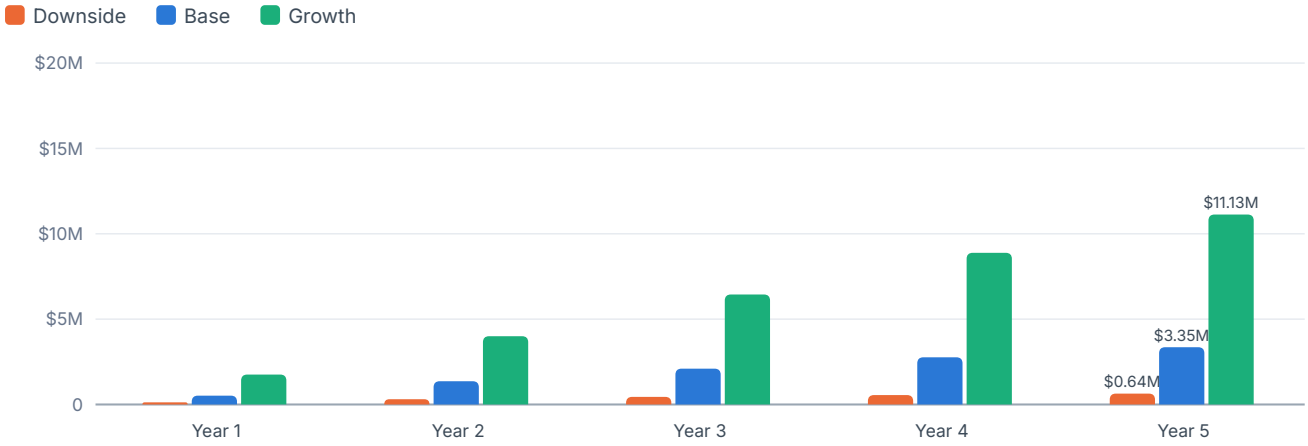

$3.35M
Base revenue, year 5 (growth case $11.13M)

Breakeven
Base operating result in year 5 (growth case $4.24M)

25,626
Base active customers, end of year 5

$2.08M
Base cumulative losses over five years, setup included

Total company revenue by case, USD

CASE	REVENUE Y1	REVENUE Y3	REVENUE Y5	OPERATING RESULT Y5	CUSTOMERS Y5	PEAK PREFUNDING	FUNDING GAP
Downside	$0.13M	$0.45M	$0.64M	($0.69M)	5,309	$1.36M	None
Base	$0.52M	$2.10M	$3.35M	≈ $0	25,626	$6.21M	None
Growth	$1.75M	$6.44M	$11.13M	$4.24M	70,339	$20.93M	$5.90M

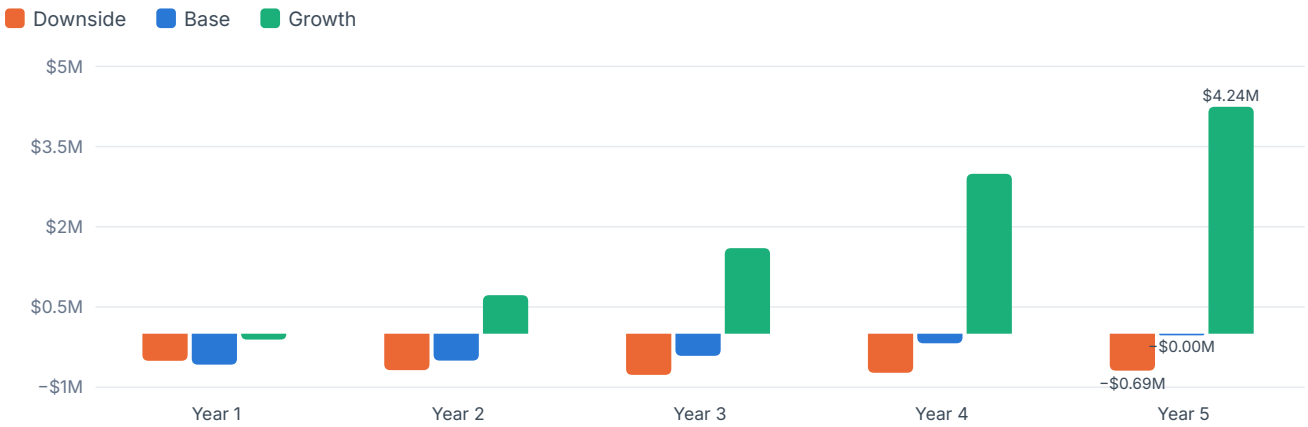

Operating result is before one-time setup, tax and financing. Funding gap is the most additional corporate cash needed at any month beyond the proposed $10 million of new capital. The cases are sensitivities, not probabilities.

BASE CASE

Five-year base-case forecast

USD	YEAR 1	YEAR 2	YEAR 3	YEAR 4	YEAR 5
Customer transfer volume (principal)	$13,437,560	$85,825,173	$161,450,775	$225,726,357	$277,469,432
Revenue					
Consumer revenue, after partner share	$54,232	$346,380	$651,595	$911,003	$1,119,832
Software subscriptions	$162,696	$615,484	$1,046,572	$1,452,493	$1,834,718
Pilots and rollouts	$300,000	$400,000	$400,000	$400,000	$400,000
Total company revenue	**$516,929**	**$1,361,864**	**$2,098,167**	**$2,763,496**	**$3,354,550**
Gross profit	$283,651	$757,071	$1,170,063	$1,548,745	$1,892,407
Operating result before setup and tax	($578,349)	($502,929)	($413,937)	($179,255)	($3,593)
One-time setup	($400,000)	$0	$0	$0	$0
Result before tax	**($978,349)**	**($502,929)**	**($413,937)**	**($179,255)**	**($3,593)**
Operating measures, end of year					
Active consumer customers	3,784	10,419	16,734	21,515	25,626
Subscribed institutions	2.9	6.6	10.1	13.4	16.5
Annual subscription run-rate	$351,116	$795,297	$1,213,549	$1,607,384	$1,978,228
Free corporate cash after reserves	$7,129,921	$4,969,841	$2,979,254	$1,580,731	$520,997

Operating result by case, USD

The base case reaches breakeven in year 5. The growth case turns profitable in year 2 and earns $4.24M in year 5.

CASH AND CAPITAL

Most of the $10 million stays on the balance sheet

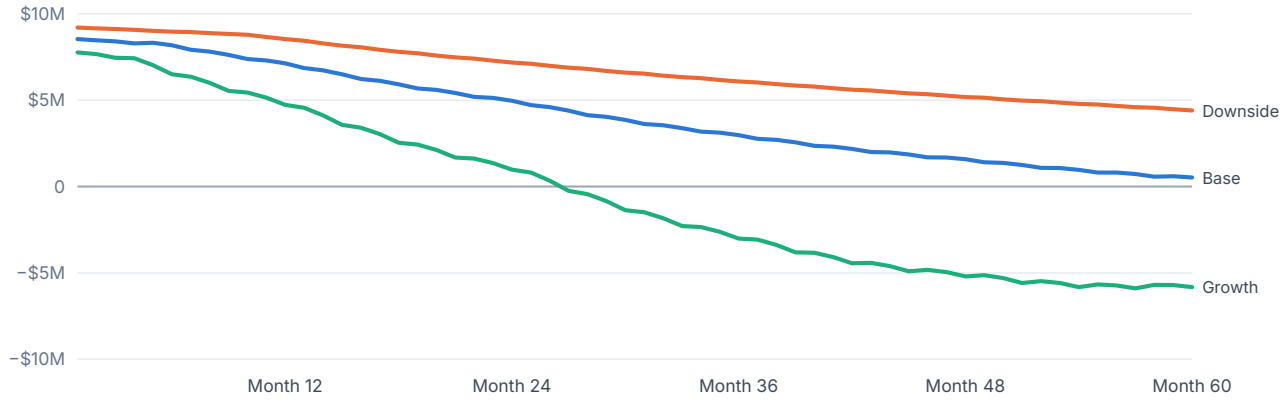

In the base case only about $2.1M of the new capital is spent on losses over five years. The largest use is settlement prefunding: the company's own money sitting in payout pools so recipients are paid on time. That money is recovered when volume falls or a bank facility replaces it.

USE OF THE $10M (BASE CASE)	USD
Settlement prefunding at its peak (year 5)	$6.21M
Restricted collateral reserve	$1.00M
Cumulative losses, including $0.40M setup	$2.08M
Lowest free cash in any month	**$0.52M**

Reading the cash line

- **Prefunding** is 5 days of converted volume, multiplied by 1.5 for stress. It grows with volume and is working capital, not spending.
- **Collateral** is a planning reserve for guarantees partners may require; the real figure depends on the licence and the bank.
- **No float income** is assumed on customer money, and no debt is used.

Free corporate cash after prefunding and reserves, by month

The growth case runs out of free cash in year 3 because prefunding grows with volume. It needs about $5.9M more by year 5. In practice that would come from a settlement credit line or partner prefunding, not new equity. The growth case still earns $9.6M of operating profit in years 2 to 5.

ASSUMPTIONS

The drivers behind each case

DRIVER	DOWNSIDE	BASE	GROWTH
Assumed launch month	Month 10	Month 6	Month 4
All-in cost per new settled customer	$45	$30	$22
Monthly active customer attrition	6%	3.5%	2.5%
Transfers per average active customer	1.1	1.3	1.5
Average sender principal	$500	$750	$1,000
Explicit fee rate	0.1%	0.1%	0.1%
FX markup on reference cost rate	0.3%	0.35%	0.4%
Rail cost rate on converted principal	0.2%	0.12%	0.08%
Partner revenue share	15%	10%	8%
Monthly acquisition budget year 1	$12,000	$18,000	$25,000
Employees year 1	8	10	12
Employees year 5	12	22	36
Loaded monthly cost per employee	$3,500	$4,000	$4,500
Annual subscription price	$60,000	$120,000	$150,000
Accepted B2B rollouts per quarter	0.5	1	2
One-time setup expense and cash	$250,000	$400,000	$650,000

All inputs are planning estimates. No provider pricing has been signed, no pricing approval is documented, and no customer behaviour has been observed yet. The full list of drivers and their basis is on the workbook's Assumptions sheet.

What has to be true

- **A lawful route for LYD collection, conversion and payout**, through Tazdan's own permission or an authorised partner.
- **Pricing approval near 0.45% all-in.** Each extra 0.10% of approved margin adds about $0.25M of revenue in year 5.
- **Acquisition near $30 per settled customer**, with monthly attrition at or below 3.5%.
- **One new institutional rollout per quarter** from year 1, at $120,000 a year per subscription.
- **Payout liquidity**: own prefunding in the base case, then a settlement facility as volume grows.
- **Costs held to plan**: 10 people in year 1, rising to 22 by year 5.

THE WORKBOOK

How to use the model

File: **Tazdan_Integrated_Financial_Model.xlsx** in this folder. Blue cells are inputs, black cells are formulas and green cells link to other sheets. Change the case on the Assumptions sheet (1 Downside, 2 Base, 3 Growth) and every sheet updates.

SHEET	WHAT IT SHOWS
Summary	Five-year results, capital needs and a monthly revenue and operating-result chart
Assumptions	Every driver for all three cases, with its basis; the case selector; evidence flags
Forecast	The 60-month engine: customers, transfers, revenue, costs, cash, prefunding and reserves
Fee calculator	One transfer priced line by line, unit economics and the pricing guardrail check
Rate margins	The LYD market-maker quote, margin by spread setting and volume, and corridor pricing checks
Acquisition	Channel budgets and the funnel to a settled customer, with blended cost
Deal structure	The proposed investment: primary and secondary amounts, ownership and implied values
CBL actuals	Published Central Bank of Libya foreign-exchange figures for January to September 2026
Review	Reconciliation checks that must equal zero, plus evidence still pending
Model guide	Definitions, accounting treatment and limitations

Checks

- Every case was recalculated independently in code and matched the workbook to within $0.001 on every summary line.
- The cash, receivables and contribution reconciliations on the Review sheet equal zero.
- Changing a later-year input flows through to the forecast, and the workbook contains no formula errors.

The model is a planning tool. It is not audited, statutory or tax accounting. Settlement in production uses exact amounts in each currency, not spreadsheet arithmetic.
